

Turny Manual Swivel Base

Manual swivel base that allows the car seat to **turn and be pulled out almost completely** from the vehicle (it partially exceeds the threshold) .

When pivoting, the user's head is inside the vehicle. This allows the caregiver to have better control of the situation and makes the procedure more **comfortable for the user**. Turny Manual has **three positions for longitudinal adjustment**. Two of them allow an adjustment of 8 cm. They can be used as a comfort setting in the car. The third position allows you to adjust the seat by an additional 16 cm when getting out.
