

# ESCAPE BOX

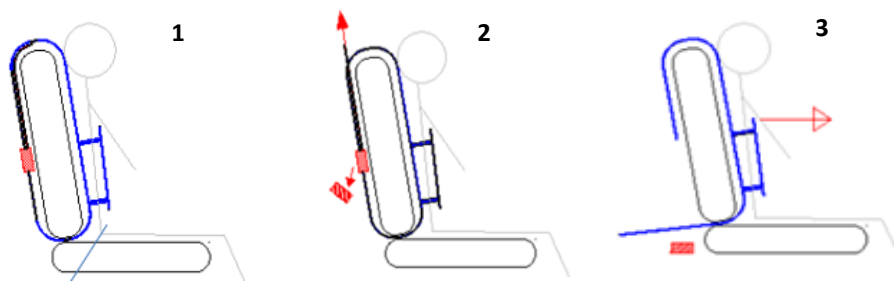

## Emergency evacuation system for car harness

### Why choose the optional Escape Box?

- The optional **Escape Box system** provides a quick evacuation in the event of an accident without unlocking the 7 buckles. It is easily accessible from the front, at the top of the seat.
- We strongly recommend the **Escape Box** when the standard evacuation system is difficult to access. This access is through the back of the seat or through the trunk.
- To travel safely and free of mind

### How to use it?

1. Escape Box installed behind the seat
2. Pull strongly on the red belt to release the harness
3. The front harness separates from the support base and the person can leave the car with the harness

### Legislation and security

- For a safe driving, the **use of the seat belt remains mandatory when using the harness**, with or without the Escape Box.
- We strongly recommend installing the **emergency belt cutter** which comes with each harness.
- The use of the vehicle harness is always at your own risk

Escape Box
